

2019/05/20 - Tuesday

- Mexican only, Helium fill instead of H.
- No LN_2
- He gas

- Spectrometer

- ↳ w/ 1800 grating, ^{Helium lines} $\{492.2 \text{ nm}, 504.8 \text{ nm}\}$ can be simultaneously measured
or $\{471.3 \text{ nm}, 492.2 \text{ nm}\}$ can be " "
- ↳ Other gratings have trouble detecting these lines.
- ↳ He lines have relatively low intensity, detection may be difficult in a H plasma w/ only a small amount of He.

- X-Ray
