

## Readme

Fig. 9a has two curves. One is red, and the other is blue.

The data for the red curve is in Fig9a.xlsx, sheet name = va\_vs\_H. The first column is the height from the surface of the Sun in solar Radii and the second column is the Alfven speed in  $10^8 \text{ cm s}^{-1}$ .

The data for the blue curve is in Fig9a.xlsx, sheet name = La\_vs\_H. The data columns are labeled. You will notice that in the paper, the blue curve is divided into two parts. The first column (column A) is the height in solar radii and the second column (column B) is the Alfven speed scale length in units of solar radii for the first part of the blue curve. The columns E and F give the data for the second part of the blue curve.
